Administration is working to help prevent home fire deaths and injuries caused by smoking materials. Fires caused by cigarettes and other smoking materials are preventable. You can make a difference! If you smoke or live with someone who smokes, watch this 30 second video and learn the facts.

Smoking and Fire Safety

Every year, almost 1,000 smokers and non-smokers are killed in home fires caused by cigarettes and other smoking materials. The U.S. Fire Administration is w...

Electrical fires in our homes claim the lives of some 280 Americans each year and injure 1,000 more. Some of these fires are caused by electrical system failures, but many more are caused by incorrectly installed wiring and overloaded circuits and extension cords. FEMA and the U.S. Fire Administration would like you to know that there are simple steps you can take to prevent the loss of life and property resulting from electrical fires

A photograph of a house at night. Two windows are visible, both of which are on fire. Bright orange and yellow flames are visible inside the windows, and some flames are also visible on the roof of the house. The house appears to be made of brick or stone. The background is dark, suggesting it is nighttime.

Older adults are more likely to die in home fires because they may move slower or have trouble hearing the smoke alarm. Make sure the people you know are prepared and safe.

Older adults are more likely to die in home fires because they may move slower or have trouble hearing the smoke alarm. Make sure the people you know are prepared and safe.

☒ Put a check in front of each statement that is true for your home.

- ☐ Smoke alarms are on every level of the home.
- ☐ Smoke alarms are inside and outside sleeping areas.
- ☐ Smoke alarms are tested each month.
- ☐ Smoke alarm batteries are changed as needed.
- ☐ Smoke alarms are less than 10 years old.
- ☐ People can hear smoke alarms from any room.

Can everyone hear the alarm?
If not, consider another type of smoke alarm – like one that has a different sound or one that comes with a bed shaker or strobe light.

- ☐ The cooking area has no items that can burn.
- ☐ People stay in the kitchen when they are frying, grilling, boiling, or broiling food.

If they smoke, make sure they are a fire-safe smoker:

- ☐ People only smoke outside and never in bed.
- ☐ People put cigarettes out safely in an ashtray with a wide base that will not tip over.
- ☐ People never smoke around medical oxygen.

- ☐ Space heaters are least 3 feet away from anything that can burn.
- ☐ People blow out candles before leaving the room.

- ☐ There is a fire escape plan that shows 2 ways out of every room.
- ☐ Exits are always clear and not blocked with furniture or other items.
- ☐ Everyone knows where the safe meeting place is outside the home.
- ☐ The escape plan works for everyone, including people who use a wheelchair, a hearing aid, or glasses.
- ☐ There is a phone near the bed to call a local emergency number in case of a fire.

Can everyone get out?
Make sure people who use a wheelchair or a cane can get to them and get out quickly. Tell them to keep glasses or hearing aids next to the bed.

☐ Carbon monoxide alarms are located on each level of the home.

☐ Carbon monoxide alarms are less than 7 years old.

- ☐ No electrical cords run under rugs.
- ☐ All electrical cords are in good condition and not broken or cut.
- ☐ People clean the dryer of lint after every use.
- ☐ All plug outlets are safe and do not feel warm when you touch them. (If they are warm, call the landlord or an electrician.)

Make a fire escape plan around your abilities.

If there is a fire in your home, you have less than 3 minutes to get out. If you need to use a wheelchair or a cane, make sure you can get to it easily and get out quickly. If you wear hearing aids or eyeglasses, put them next to your bed while you are sleeping.
